Enclosure 2

Geographic Intelligence Collection

a. The coordinated collection of maps in the Free World increased to 60,000 map sheets, with seven Geographic Attaches conducting field procurement. The timely acquisition of 6,000 maps from Iraq constituted the only significant receipts from that country since 1945.

b. Collection of Sov-Elec topographic maps was almost negligible during the year; however, a new inter-agency program has been implemented to provide covert collectors with detailed requirements, guidance, and operational support.
